

**Dry type fish feed press machine**

Dry type fish feed press machine is a simple machine to produce floating fish feed and sinking fish feed, the machine itself is simple structure, it applies electric heater circle to heating the extruding chamber thus to kill the bacteria and pathogen and provide 100-120°C temperature for the feed pellets shaping.

Compared with the wet type fish feed machine, the dry type have smaller model to for starter, and the dry dry type do not need boiler, thus to save investment.

The dry type fish feed press machine is quite easy to install, just put the machine on a level ground, fix the machine and connect cables between the motors and electric panel, electric panel and your electric supply, then you can feed the mixed 0.18-0.25mm ingredients into the feeding hopper to make feed pellets. By change different mold, you can get pellets with diameter from 0.8mm to 12mm. The length of pellets is easy to adjust from the cutter.

When we deliver the machine, together with the machine we give you three mold for free.

**Dry type fish feed press machine technical data:**

### III. Spare parts

Spare parts for fish feed pellets extruder is: mold, screw, screw turnbuckle, cutter

We will send you one set of spare parts, it include: three molds, two screw, two wearing sleeve, one cutter. Because when only ship the spare parts, the shipping cost will be high, so we would recommend to have some spare parts when you order the machine.
